in patients with chronic kidney disease in type 1 diabetes (CKD in T1D)

Getting Started With KERENDIA

Information and savings to help you every step of the way

Find savings and support info on pages 11 to 15.

What is KERENDIA?

KERENDIA (finerenone) 10 mg, 20 mg tablets is a prescription medicine used to reduce urinary albumin-to-creatinine ratio (UACR), a measure of protein in the urine, which is expected to reduce the risk of worsening of kidney disease and kidney failure in adults with chronic kidney disease (CKD) associated with Type 1 diabetes (T1D)

Important Safety Information

Do not take KERENDIA if you:

- Are allergic to any of the ingredients in KERENDIA
- Take certain medications called CYP3A4 inhibitors. Ask your healthcare provider if you are not sure if you are taking any of these medications
- Have problems with your adrenal glands

Please see additional Important Safety Information and Important Facts About KERENDIA throughout.

Q: What is chronic kidney disease in type 1 diabetes (CKD in T1D)?

A:

- If you have Type 1 diabetes, you may have chronic kidney disease. CKD happens when kidneys get damaged and can worsen over time, which can lead to kidney failure, and dialysis

Q: What is urine albumin-to-creatinine ratio (UACR)?

A:

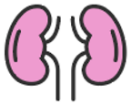

- A UACR test measures how much albumin (a specific protein) is in your urine and helps your doctor diagnose CKD
- High levels of albumin may be a sign of widespread damage to your blood vessels in organs like the kidney

Important Facts About KERENDIA

About KERENDIA

KERENDIA (finerenone) is a prescription medicine used to treat adults with chronic kidney disease in Type 1 diabetes.

KERENDIA is proven to reduce UACR, a measure of protein in the urine, which is expected to **reduce the risk of:**

- **Worsening of kidney disease**
- **Kidney failure**

Q: Who should not take KERENDIA?

A:

- Patients who are allergic to any of the ingredients in KERENDIA
- Patients who take certain medications called CYP3A4 inhibitors. Ask your healthcare provider if you are not sure if you are taking any of these medications
- Patients who have problems with adrenal glands

Please see additional Important Safety Information and Important Facts About KERENDIA throughout.

Important Facts About KERENDIA (cont'd)

Q: What warnings should I know before starting treatment with KERENDIA?

A:

- KERENDIA can cause the potassium level in your blood to increase (hyperkalemia). Your healthcare provider will check your potassium level and kidney function before starting and during treatment with KERENDIA. Before taking KERENDIA, tell your healthcare provider if you have high levels of potassium in your blood, or take medications that may increase potassium in your blood

Q: What should I tell my healthcare provider about before starting treatment with KERENDIA?

A: Tell your healthcare provider if you:

- Have severe liver problems
- Are pregnant or plan to become pregnant, or are breastfeeding or plan to breastfeed. Avoid breastfeeding during treatment with KERENDIA and 1 day after treatment
- Take any prescription and over-the-counter medicines, salt substitutes, vitamins, and herbal or potassium supplements

Q: What should I keep in mind while taking KERENDIA?

A:

- KERENDIA may affect the way other medications work, and other medications may affect how KERENDIA works. Do not start or stop any medicine before you talk with your healthcare provider
- Avoid grapefruit or grapefruit juice as it may increase KERENDIA levels in the blood

Please see additional Important Safety Information and Important Facts About KERENDIA throughout.

Important Facts About KERENDIA (cont'd)

Q: What are the most common side effects while taking KERENDIA?

A: The most common side effects seen in people receiving KERENDIA were:

- **Hyperkalemia** (potassium level in your blood that is higher than normal)
- **Hypotension** (blood pressure that is lower than normal)
- **Hyponatremia** (sodium level in your blood that is lower than normal)

Tell your healthcare provider if you have any side effects that bother you or do not go away.

The risk information provided here is not comprehensive.

How to get more information:

- Talk to your healthcare provider or pharmacist
- Click www.KERENDIA.com to obtain the FDA-approved product labeling
- Call 1-888-KERENDIA

You are encouraged to report side effects or quality complaints of products to the FDA by visiting www.fda.gov/medwatch or calling 1-800-FDA-1088.

Please see the Prescribing Information for KERENDIA.

Please see additional Important Safety Information and Important Facts About KERENDIA throughout.

Dosing

It's important to take KERENDIA as prescribed.

KERENDIA is a **once-daily** oral tablet. You should swallow the tablet whole with or without food.

If you are unable to swallow a whole tablet, KERENDIA may be **crushed** and **mixed** with water or soft foods such as applesauce immediately prior to use and taken orally.

It is important that you **avoid eating grapefruit** or **drinking grapefruit juice** as it may increase KERENDIA levels in your blood.

Take KERENDIA as prescribed and do not start or stop any medicine before talking with your healthcare provider. Check with your healthcare provider or pharmacist if you're not sure.

If you miss a dose of KERENDIA, take your prescribed dose as soon as you remember before the next scheduled dose. **Do not take 2 doses on the same day to make up for a missed dose.**

Important Safety Information (cont'd)

What are the possible side effects of KERENDIA?

KERENDIA may cause serious side effects, including:

- **High potassium levels in your blood (hyperkalemia).** Your healthcare provider will check your potassium level before and during treatment with KERENDIA.

The most common side effects of KERENDIA include hyperkalemia (potassium level in your blood that is higher than normal), hypotension (blood pressure that is lower than normal), and hyponatremia (sodium level in your blood that is lower than normal).

Please see additional Important Safety Information and Important Facts About KERENDIA throughout.

Storage

Store KERENDIA at **room temperature** between 68°F and 77°F (20°C and 25°C).

Keep KERENDIA and all medicines out of reach of children.

Important Safety Information (cont'd)

Before you take KERENDIA, tell your healthcare provider about all your medical conditions, including if you:

- Have high potassium levels in your blood (hyperkalemia) or take medications that may increase potassium levels in your blood
- Have severe liver problems
- Are pregnant or plan to become pregnant, or are breastfeeding or plan to breastfeed. Avoid breastfeeding during treatment with KERENDIA and 1 day after treatment

Savings and Support (cont'd)

If you have Medicare, consider the following Medicare programs to save on cost:

Medicare Extra Help

Medicare Extra Help, also known as Low Income Subsidy, is a program for people with low income. It helps cover the cost of Medicare Part D drug plans—like premiums, deductibles, and copays.

To apply or learn more, call 1-800-772-1213 or visit ssa.gov/extrahelp.

Medicare Prescription Payment Plan

This plan allows you to spread out your out-of-pocket costs, which are capped at $2,100 for 2026, so you don't have to pay them all at once.

Contact your Part D plan to learn more

If you have commercial insurance:

Pay as little as $0 with the KERENDIA Copay Savings Card

Eligible commercial patients may pay as little as $0 per month for KERENDIA.*

Click KERENDIA.com/copay to get started.

*Patients are eligible if they are commercially insured. Benefit limitations apply. Patients who are enrolled in any type of government insurance or reimbursement programs are not eligible. Full terms and conditions apply.
